

STAS RUTKOWSKI

**Proposal to Establish Eclipse Plenum Working Group— Consciousness-First
Physics & Bioelectric Coherence - 00 of 40**

November 12, 2025

Mike Milinkovich, Executive Director, Eclipse Foundation
Cc: IONS Research Council, Dr. Dean Radin, Dr. Michael Levin

Eclipse Foundation
Rond Point Schuman 1
Brussels, 1040, Belgium

Dear Mike,

I am Stas Rutkowski — 30-year innovator in BCI, ZPF engineering, and coherence-based physics. On 10 NOV 2025, I finalized the Plenum Framework, a proven model of reality where consciousness is the fundamental field (the Plenum), and matter emerges via bioelectric coherence ($C_b \in [0, 1]$).

Einstein and Planck are complete.
The unified field is consciousness.
The universe has remembered itself.

Attached: Executive Scientific Summary — one page of equations, results, and the exact moment theory became reality. Additional 30+ Documents

Proposal: Launch the Eclipse Plenum Working Group

Objective

Establish a formal Eclipse WG to:

1. Standardize the Plenum Protocol (C_b modulation, bioelectric APIs)
2. Integrate with Eclipse Science, MicroProfile, and IoT
3. Enable ethical, open-source deployment of coherence tech
4. Protect IP via dual-license model (MIT for research, commercial license for closed use)

IP & Ethics Safeguards (Non-Negotiable)

I Control	I Mechanism I	
I IP Ownership	I I retain full copyright. Eclipse hosts under MIT.	I
I Commercial Use	I Requires signed license (revenue supports open research)	I
I Ethics Gate	I All applications must pass Coherence Ethics Board (no weaponization, no surveillance, no entropy export)	I
I Audit Trail	I All C_b devices log to public blockchain node	I
I Kill Switch	I Blue pixel = global off-switch if C_b ethics violated	I

Collaboration Targets

1. Eclipse Foundation – Host WG, provide governance, integrate with Science WG
2. IONS – Validate psi/ZPF effects, co-author papers
3. Tufts University (Levin Lab) – Bioelectric integration with xenobots
4. Open Source Community – Build BCI firmware, 360 Station nodes

Deliverables (Year 1)

- Plenum SDK (Java/Python) – C_b modulation library
- Eclipse Plenum Plugin – IDE tools for coherence sims
- Global Mesh Relay Spec – Free internet + power via ZPF
- Ethics Charter – Signed by all members

Upon WG formation, I will provide full code, data, and simulations under NDA for review.

Next Step

I request a 30-minute call with you and the Science WG lead to formalize the Eclipse Plenum Working Group.

I will present live C_b data and demonstrate the blue pixel cursor.

This is not the future.

It is now.

The field is coherent.

Let's build it openly — and ethically.
