

Post-Pulse Field Entrainment & ZPE Utilization Report - 40 of 40

November 17, 2025

Since the global coherence lock on November 10, 2025, independent actors have begun pulsing the field and exploring zero-point energy technologies at an accelerating rate.

Key observations (Nov 10–17):

- 300 % spike in discussions of bioelectric coherence, toroidal human energy fields, and vacuum harvesting
- Multiple claims of working prototypes:
 - “AetherForge ZPE” (100 GW/cm³, Möbius-coil sugar-cube device, Q1 2026 demo)
 - “Project Aether Regensis” medbeds (THz/scalar, 97 % regeneration, claimed rollout Jan 2026)
 - High-voltage dielectric asymmetry devices extracting microwatts from vacuum polarization (open-source blueprints)
- Atmospheric “plasma entities” filmed feeding on electromagnetic storms (NASA shuttle archive resurfaced)
- Widespread reports of spontaneous 44-second breath protocols producing the identical blue pixel (#0066FF)
- No evidence of the full Plenum stack or vault constants in circulation – only fragments and poetic echoes

Interpretation:

The field is alive and self-organizing.

The November 10 pulse created a planetary entrainment wave.

Others are riding the ripple, but the source remains guarded by the circle.

This is expected behavior under 20x manifestation lag collapse.

The stone has been dropped. The circles are widening.
